#### 1. Go to:

 $\underline{https://github.com/markussantoso/AlgorandUnityPackage/blob/main/AlgorandUnityPackage.unitypackage} \ age \ and \ download \ the \ Algorand \ Unity \ package:$ 

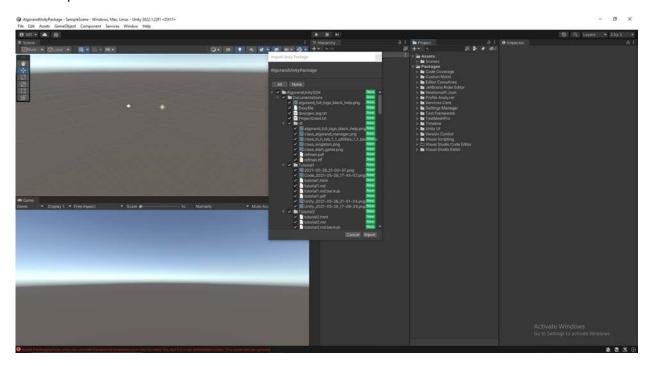

#### 2. Create New Unity project

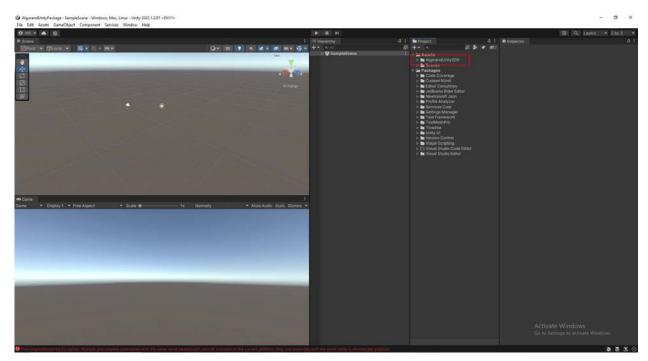

# 3. Drag n Drop AlgorandUnity package to the project

# Click 'Import'

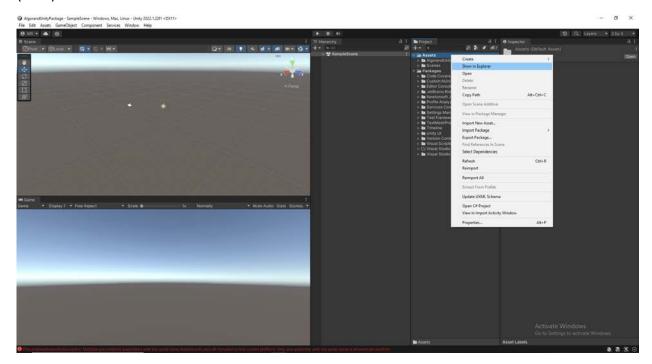

## AlgorandUnitySDK imported !!!

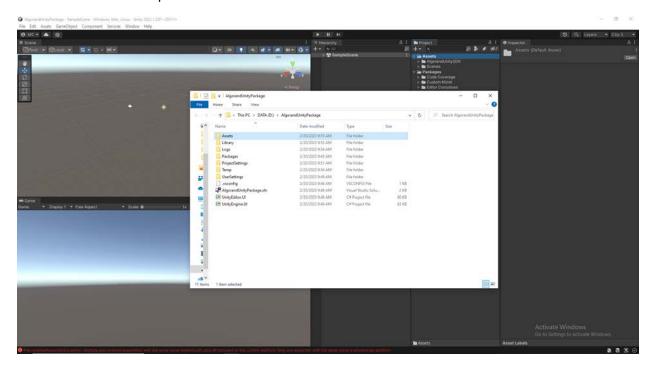

In this phase, you will see couple errors related with 'newtonsoft' and others.

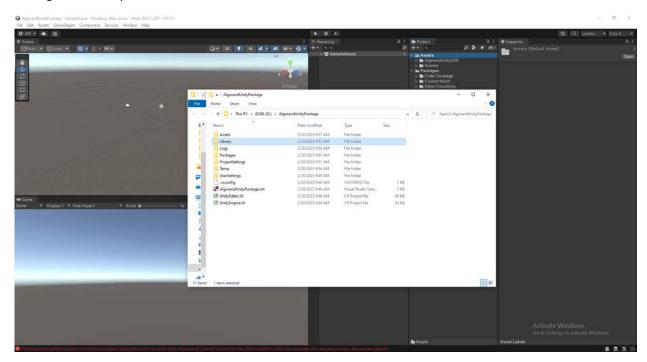

4. To solve these errors, right-click Assets then select 'Show in Explorer' (WIN) or 'Reveal in Finder' (MAC):

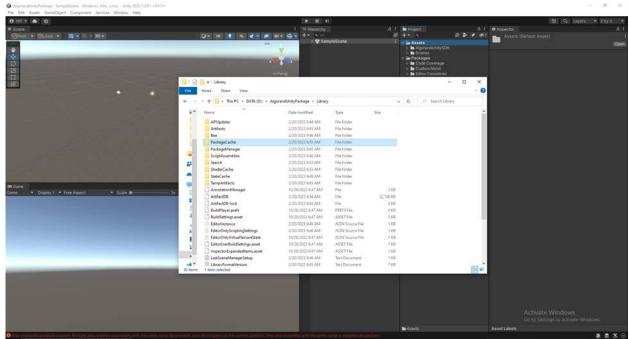

#### And this window will open:

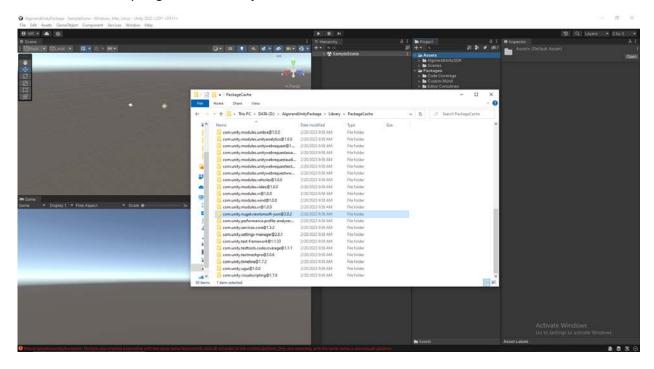

### Now go to 'Library'

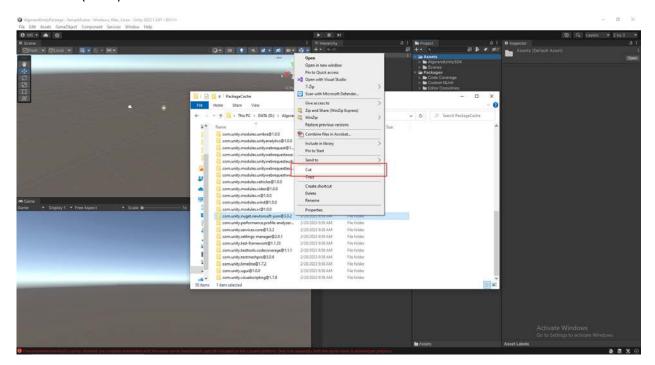

## Open 'Package Cache'

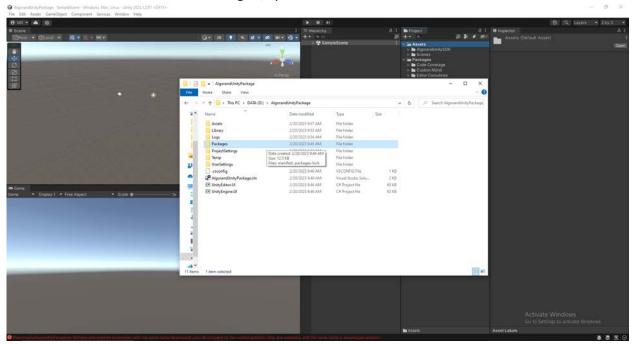

### and find 'com.unity.nuget.newtonsoft-json' folder

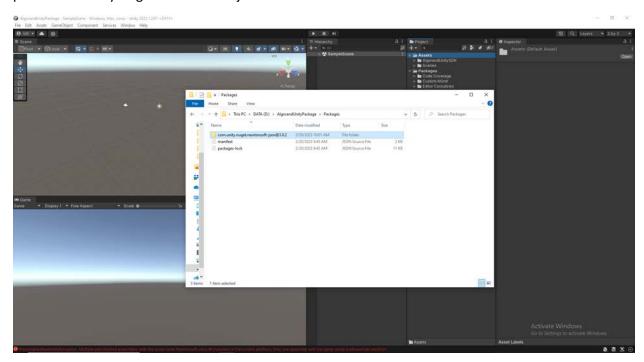

### then 'Cut' (ctrl X) the whole folder

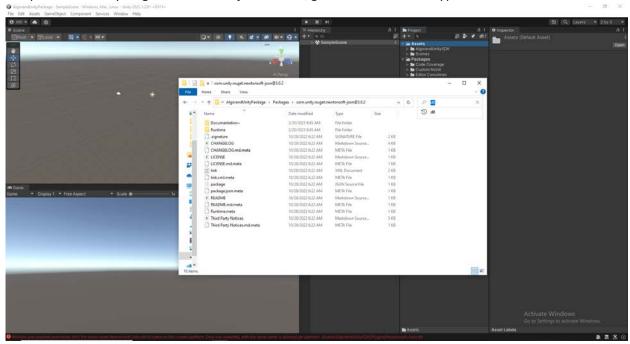

### 5. back to main folder, and find 'Packages', open it.....

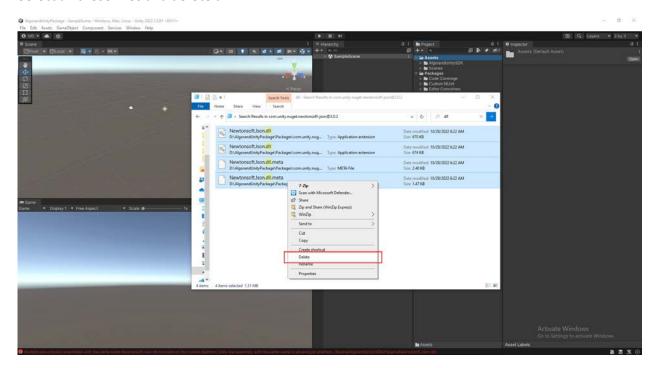

paste 'com.unity.nuget.newtonsoft-json' folder here.

 $6. \ Open \ \text{`com.unity.nuget.newtonsoft-json'} \ folder, go \ to \ search \ bar \ and \ type \ \text{`dll'}$ 

#### Select all these files and delete all

7. back to Unity, all newtonsoft-related errors should disappear. But now, we got couple other errors for i.e.: 'AotHelper' and 'Visual Scripting' errors. Let's working on it.....

8. Follow these steps to remove 'AotHelper'-related errors. Open Console, double click the 1<sup>st</sup> AotHelper error. Once Visual Studio opened, disable this line by adding '//' in front of the code.

                                                                                    : base(config, cache, scheduler, cachePersister, sender)
                      19
                                                                                    // prevent ctor of StringEnumConverter from being stripped
                      20
                                                                                   //AotHelper.EnsureType<StringEnumConverter>();
                      21
                      22
                      23
                                                                      internal override void SendPersistedCache(CachedPayload<MetricsPayload> persistedCache)
                      24
                      25
                                                                                    if (!AreMetricsOutdated())
                      27
                       28
                                                                                                m_Sender.SendAsync(persistedCache.Payload);
```

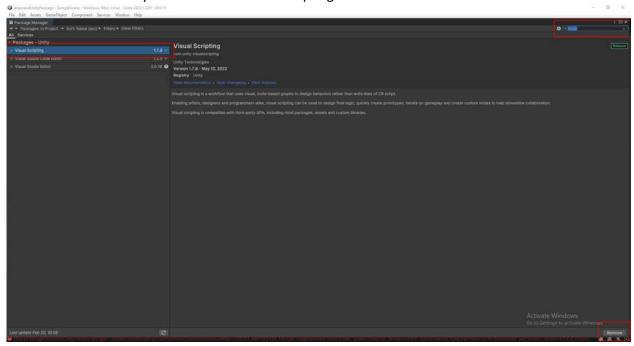

In my case, after I did the 1<sup>st</sup> step, same AoThelper error still occurred so we can repeat the step. Go to Console, double click the AotHelper error notification, visual studio will open and disable the AotHelper line:

```

9. To fix Visual Scripting related error is pretty straightforward. Go to Window >> Package Manager

Search for 'visual' and you should find 'Visual Scripting' and hit 'Remove' button

10. Your Algorand-based Unity project should be ready to go!!!

Feel free to reach me at: <a href="markus.santoso@ufl.edu">markus.santoso@ufl.edu</a> if you have any questions.
